

Practical No. : 1

Aim : Creating a Forensic Image using FTK Imager/Encase Imager

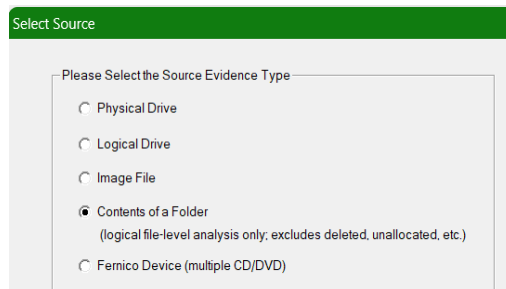

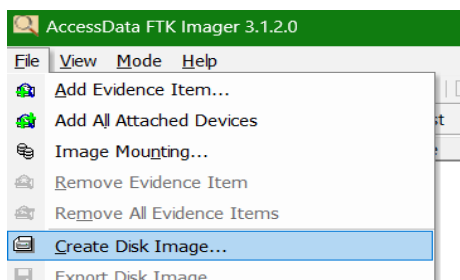

- Creating Forensic Image
- Check Integrity of Data
- Analyze Forensic Image

Step 1: Install AccessData FTK Imager Software

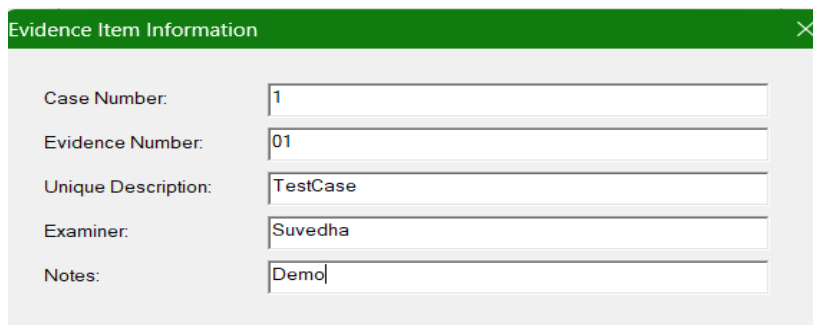

Step 2: Create a folder with your name (Suvedha) , and inside that create 2 sub folders (Input and Output). Inside Input folder save different types of files (.pdf, .docx, .jpg)

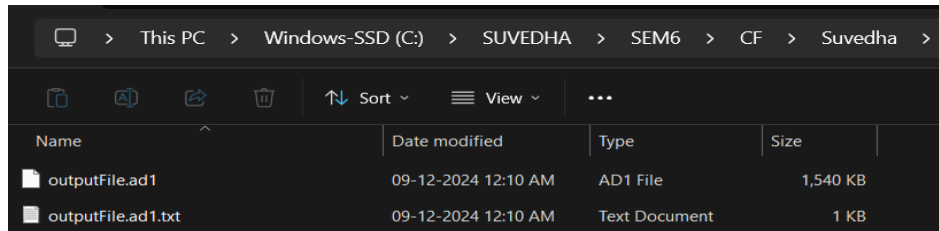

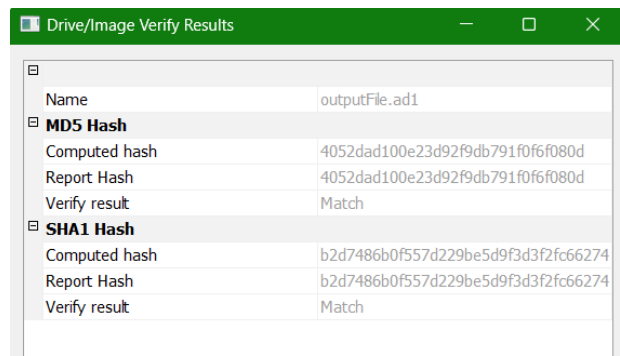

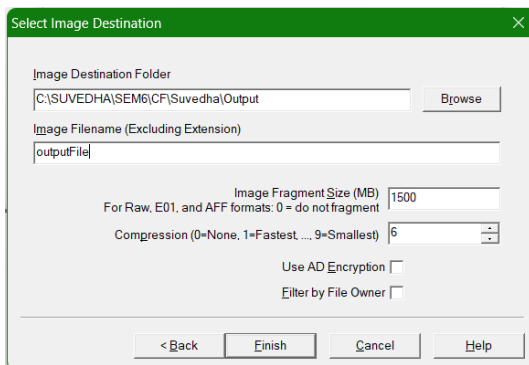

Step 3: Open installed FTK software. Go to File -> Create Disk Image -> Choose “Contents of a folder” -> Browse the Input folder path -> Finish -> Add

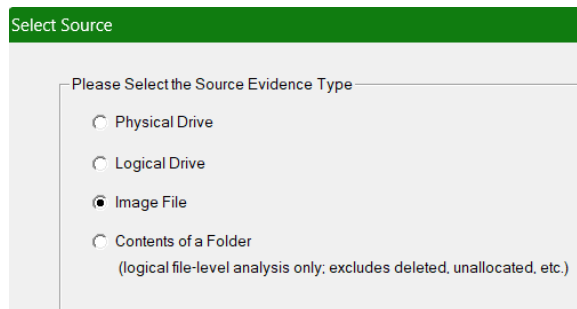

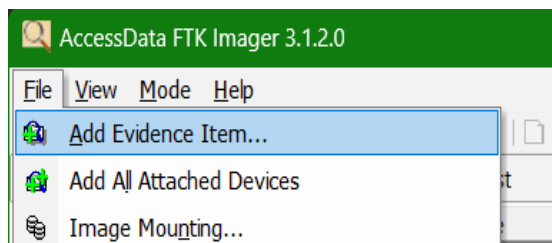

Step 4: Provide demo information -> Next

Step 5: Browse Output folder and give a filename (outputFile) > Finish > Start. You will be able to see a dialog box which contains hash values. In Output folder 2 files will be created (.ad1 and .txt).

Step 6: To extract the files from .ad1 files. Open FTK software. Go to File -> Add Evidence Item ... -> Choose “Image File” -> Next -> Browse outputFile.ad1 file -> Finish

Step 7: By accessing the Evidence Tree, you can view and extract files.
