

Practical No : 7

Aim : Steganography Detection

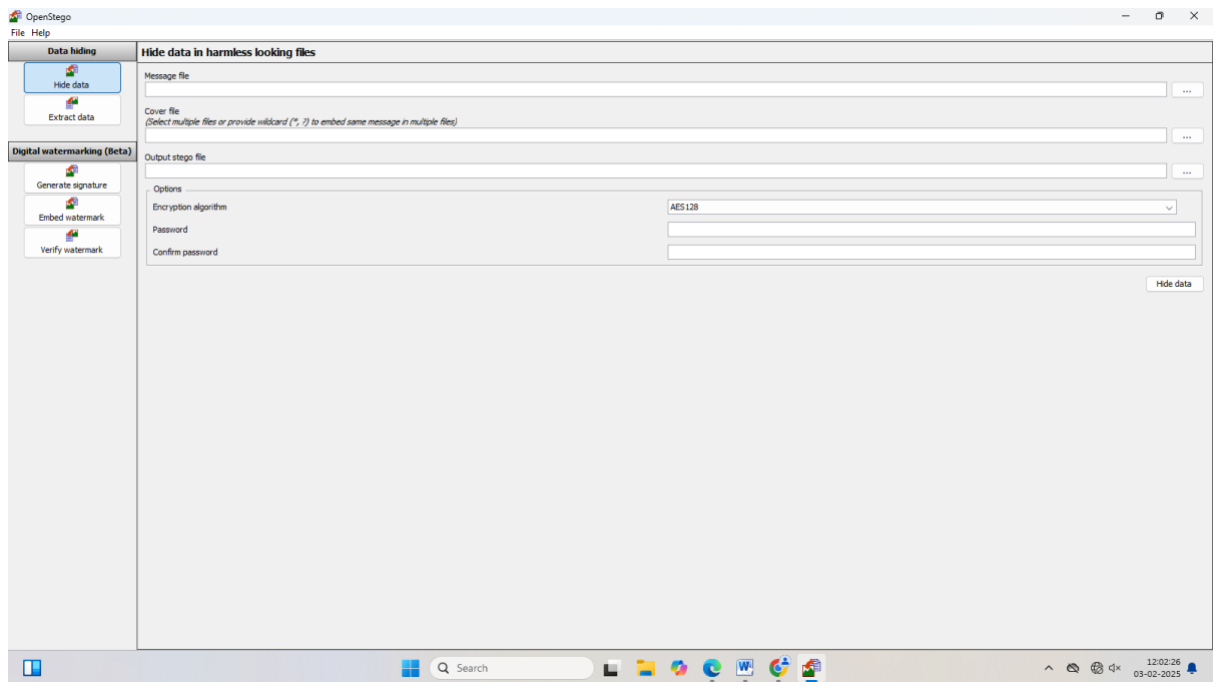

- Detect hidden information or files within digital images using steganography analysis tools.
- Extract and examine the hidden content.

Steps :

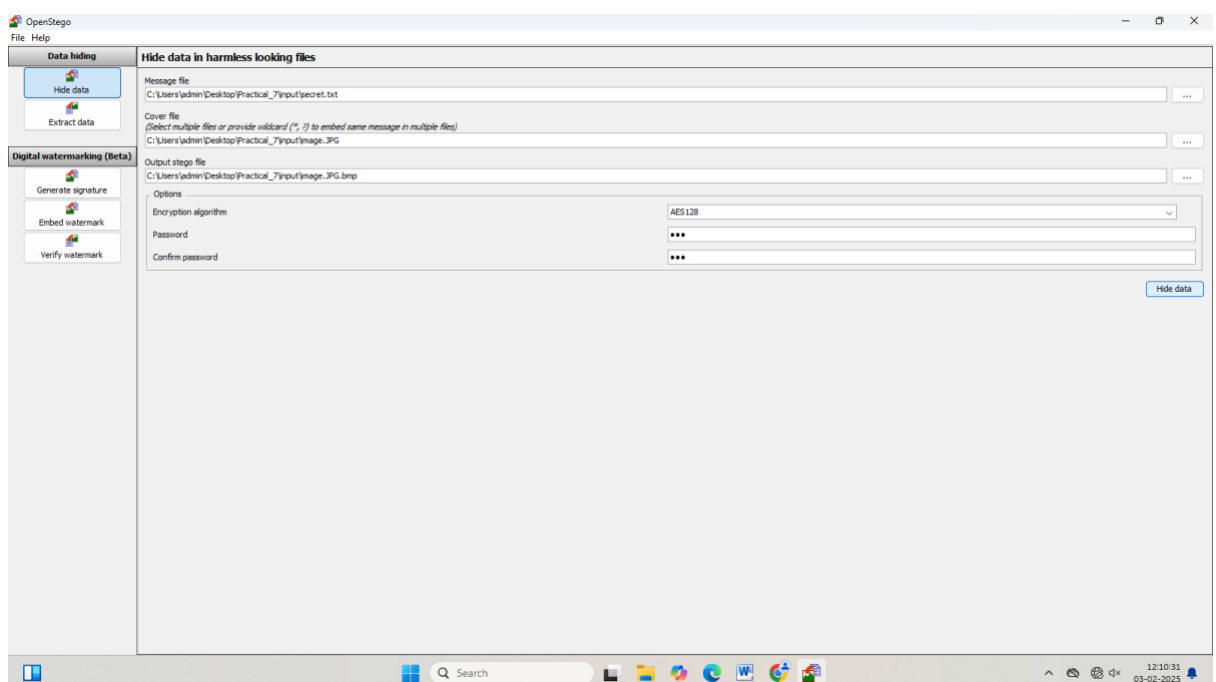

- Detect hidden information or files within digital images using steganography analysis tools.
1. Download 'OpenStego'
 2. Create two folders as 'Input' and 'Output'. In Input folder, we have a text file (to be hide) and an image file (in which the text file will be hide).

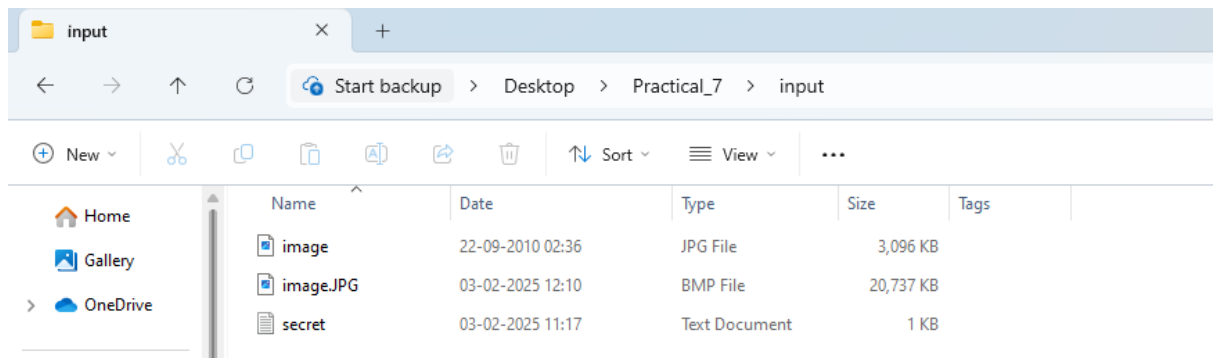

3. Open 'OpenStego', Click on Hide data.

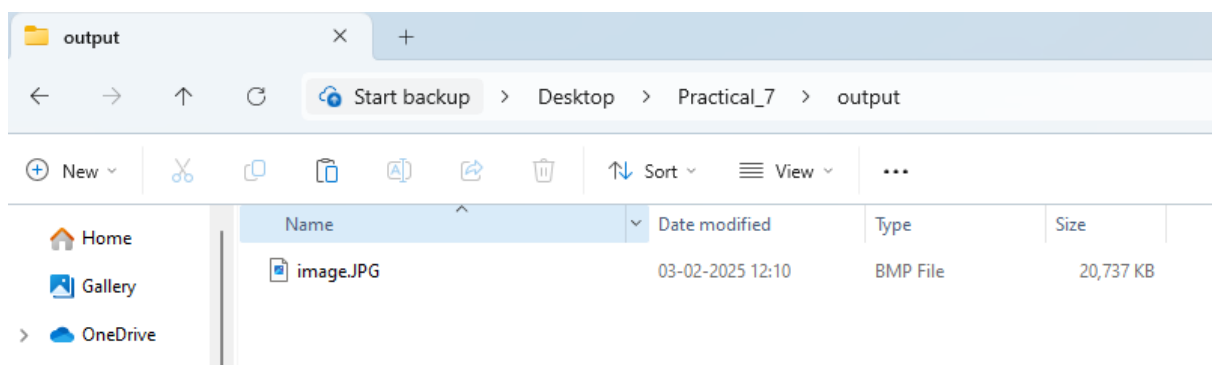

4. Fill all the details :
 - a. Message file : Path of text file of Input folder
 - b. Cover file : Path of image file of Input folder
 - c. Output Stego file : Path of image file of Input folder ,extension : bmp (Click 'All files' in Files of type)
 - d. You can enter password but it not necessary
5. Click on Hide data button

- Now, you can see in Input folder, image file with extension .bmp will be added

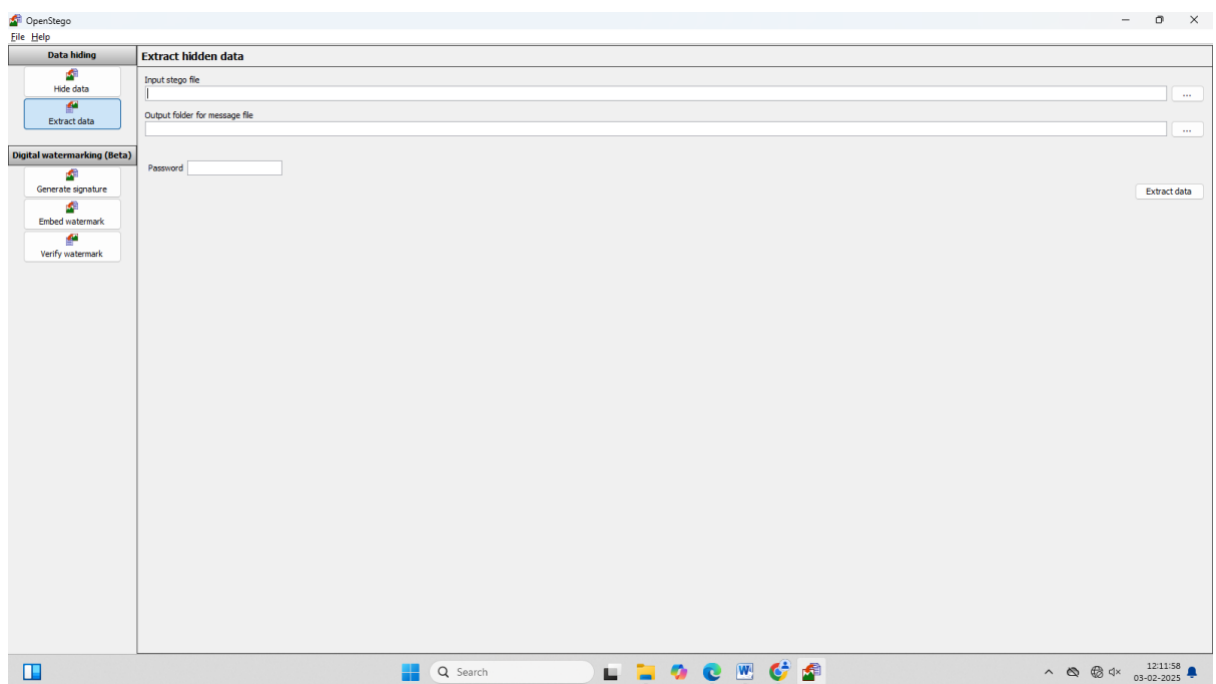

- Copy that .bmp file from Input folder to Output folder

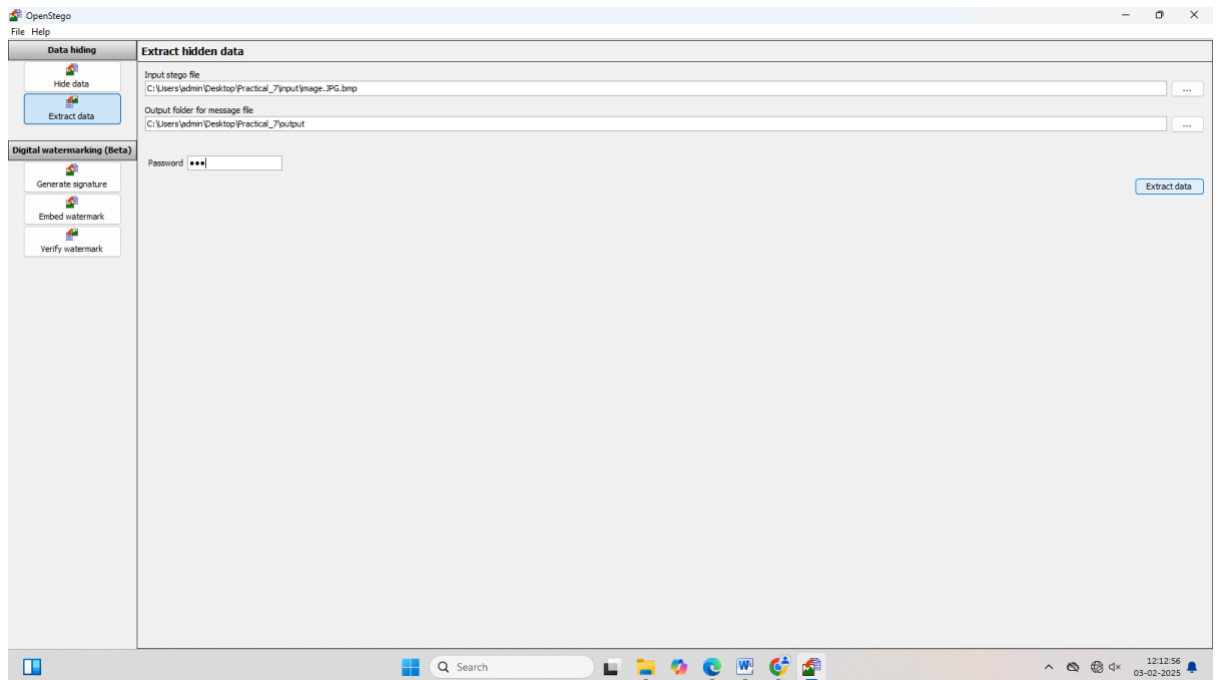

- Extract and examine the hidden content.

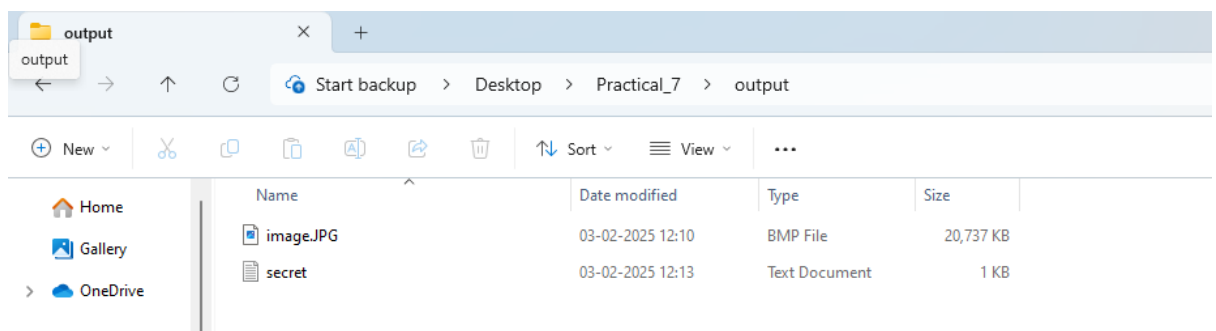

- Open 'OpenStego', Click on Extract data

2. Fill in the details :
 - a. Input Stego file : Path of .bmp file of Input folder
 - b. Output folder for message file : Path of Output folder
 - c. Password : Enter password if you have entered while hiding data.
3. Click on 'Extract data' button

4. Now, you can see the extracted text file in Output folder

Conclusion : Hence, we have successfully performed the practical
